

Southgate Process Equipment, Inc.

Packaged Systems

Southgate Process Equipment, Inc. helps industry solve process problems with computer designed skid mounted package systems. Each custom designed system is engineered and built with the specific objective of saving space, optimizing performance and minimizing cost. Southgate has been supplying manufacturing plants a full line of pumps, heat exchangers, blowers, vacuum equipment and related process equipment since 1993. We have over 100 years of combined industrial experience. Our years of field proven experience have enabled us to accurately evaluate operating conditions, anticipate problems and provide for future system requirements. Southgate's expertise and equipment resources allow Southgate to cost effectively design a engineered package system for your specific project needs.

Southgate's packaged systems are designed to save space and yet are fully serviceable. We use only the highest quality of available pumps, heat exchangers and components which eliminates costly downtime. Each component is selected for overall system compatibility, durability and cost effectiveness. Each of our packaged systems are skid mounted, pre-wired and pre-piped to simplify installation. Each unit is hydrostatically tested at the factory to insure a trouble-free start-up.

Contact Southgate Process Equipment, Inc. for any packaged system needs you have. With our industry expertise we will make sure to go over your project needs, provide an exceptional product in a timely matter that meets your project needs.
